TIME-SENSITIVE INSTALLATION AT SECURED GOVERNMENT FACILITY

LoTec understands that our customers often have time-sensitive projects that need to be completed as soon as possible. We excel at providing fast, effective solutions to customers of all types, including our recent assignment for a secured government facility.

This assignment required the supply of (7) Allison 501 exhaust silencers located at a secured government facility. The government client had extremely specific noise specifications and had specialized structural engineering stipulations that had to be met quickly.

Originally LoTec installed the exhaust silencers and understood exactly what was required to meet the client's needs in a timely fashion. Since the noise had become so bothersome to the client's neighbors, additional acoustic provisions had to be taken care of as soon as possible.

LoTec's proposed design met the requirements of the client with the addition of meeting EPA test ports. The final product not once but twice exceeded the expectation of the customers in both quality and timely delivery.

If you need a fast solution to noise issues, contact LoTec today. Let's talk about how we can help.
